

M2 Project

Project 1

Problem Statement

A large company named XYZ, employs, at any given point of time, around 4000 employees. However, every year, around 15% of its employees leave the company and need to be replaced with the talent pool available in the job market. The management believes that this level of attrition (employees leaving, either on their own or because they got fired) is bad for the company, because of the following reasons –

- 1.The former employees' projects get delayed, which makes it difficult to meet timelines, resulting in a reputation loss among consumers and partners
- 2.A sizeable department has to be maintained, for the purposes of recruiting new talent
- 3.More often than not, the new employees have to be trained for the job and/or given time to acclimatize themselves to the company

Hence, the management has contracted an HR analytics firm to understand what factors they should focus on, in order to curb attrition. In other words, they want to know what changes they should make to their workplace, in order to get most of their employees to stay. Also, they want to know which of these variables is most important and needs to be addressed right away.

Since you are one of the star analysts at the firm, this project has been given to you.

Project 2

Problem Statement

A large e-commerce marketplace company named ABC, gets very high number of comments and feedbacks from its clients. The management believes that this level of data is very important for the company and help improve its quality of its service.

Company want more people to be deployed in reading and processing the comments into positive and negative. Currently, the processing of these comments is a manual exercise. As the feedbacks continue to grow, company expenses are also increasing with more number of employees working on it.

Hence, the management has contracted you as an analytics expert to help build a model that can automatically segregate the comments and feedbacks received by the clients.

Since you are one of the star analysts at the firm, this project has been given to you with specific focus on identifying negative comments accurately.

THANK YOU
