

PROJECT DELIVERY SUMMARY

Comprehensive End-to-End Execution Report

To: Ekta
From: Ayush Rajput | Freelance Data Analyst & BI Specialist
Subject: Final Project Delivery & 20-Hour Sprint Work Summary
Date: July 24, 2026

Dear Ekta,

I am thrilled to submit the final deliverables for all modules ahead of our Saturday deadline. Over the past **20 hours of continuous, dedicated sprint work**, I have completely transformed your raw datasets into automated scripts, deep-dive analytical reports, and interactive executive dashboards.

Here is a detailed breakdown of the exact value and solutions delivered across the 3 main projects during this intensive sprint:

 Module 1: HR Analytics & Recruitment Strategy

Advanced Excel Modeling

- **Data Cleaning & Structuring:** Processed and cleaned a highly complex, unstructured HR database.
- **Metric Development:** Calculated critical recruitment metrics, workforce performance indicators, and cost-per-hire analytics.
- **Deliverables Created:** Cleaned Master Database (*M1_Final_Analysis.xlsx*), a 9-Sheet Comprehensive Data Report, and a high-level Executive Presentation summarizing key HR strategies.

 Module 2: Employee Attrition & E-Commerce NLP

Python Automation & Pandas Data Science

- **Employee Attrition (Data Merging):** Wrote custom Python scripts to perfectly merge multiple massive datasets (In-time, Out-time, Surveys) without data loss, identifying exact triggers for employee burnout.
- **E-Commerce Sentiment Analysis (AI/NLP):** Built an automated Natural Language Processing (NLP) model from scratch. Automatically processed **8,000+ raw customer reviews**, segregating them into Positive and Negative categories to extract critical negative feedback.
- **Deliverables Created:** Final merged CSV datasets, automated Python scripts, and detailed analytical PDF reports for both cases.

Module 3: RentSpace Executive Dashboard

Tableau Business Intelligence

- **Financial Data Integration:** Joined high-volume *Order Details* and *Order-wise Cost* datasets to build a completely new metric: Net Profitability.
- **Interactive Board-Level Dashboard:** Designed a premium, interactive Tableau Dashboard specifically tailored for the Board of Directors.
- **Key Insights Uncovered:** Pinpointed the exact cash-flow drain (Manhattan region operating at a huge loss) and identified high-yield assets (Houses in Brooklyn and Queens).
- **Responsive Design:** Configured the dashboard using Device Designer for seamless viewing on Laptops, Tablets, and Mobile phones.
- **Deliverables Created:** Interactive *.twbx* file and a deep-dive Strategic PDF Report.

Working on these diverse data problems—from Excel modeling to Python NLP and Tableau BI—has been an incredible journey. My goal was to ensure you get 100% accurate, board-ready results without you having to worry about a single technical detail.

Please review the attached ZIP folder containing the structured files. I am available anytime if you need a walkthrough of the dashboard or the Python code. Thank you for this amazing opportunity!

Best Regards,
Ayush Rajput
